# ABOUT US

As a member of M3 Group, M3 Fenestration utilises the precision engineering and installation expertise of the M3Floodtec division to provide market leading windows, doors, roof lanterns and cavity closers to many of the U.K's leading developers.

We are recognised as one of the U.K's leading fabricators, due to our extensive experience of manufacture and installation of precision engineered flood resilience products. This skill set enables M3 Fenestration to deliver on time, to budget and to the highest standards.

Our Worcestershire head office is home to a market leading BSI approved testing and R&D facility. This is available to M3 Fenestration for the development of bespoke product solutions and demonstration of our non-flood products.

Utilising the expertise of our M3 Floodtec division offers us the competitive advantage of being able to react quickly to clients' needs.

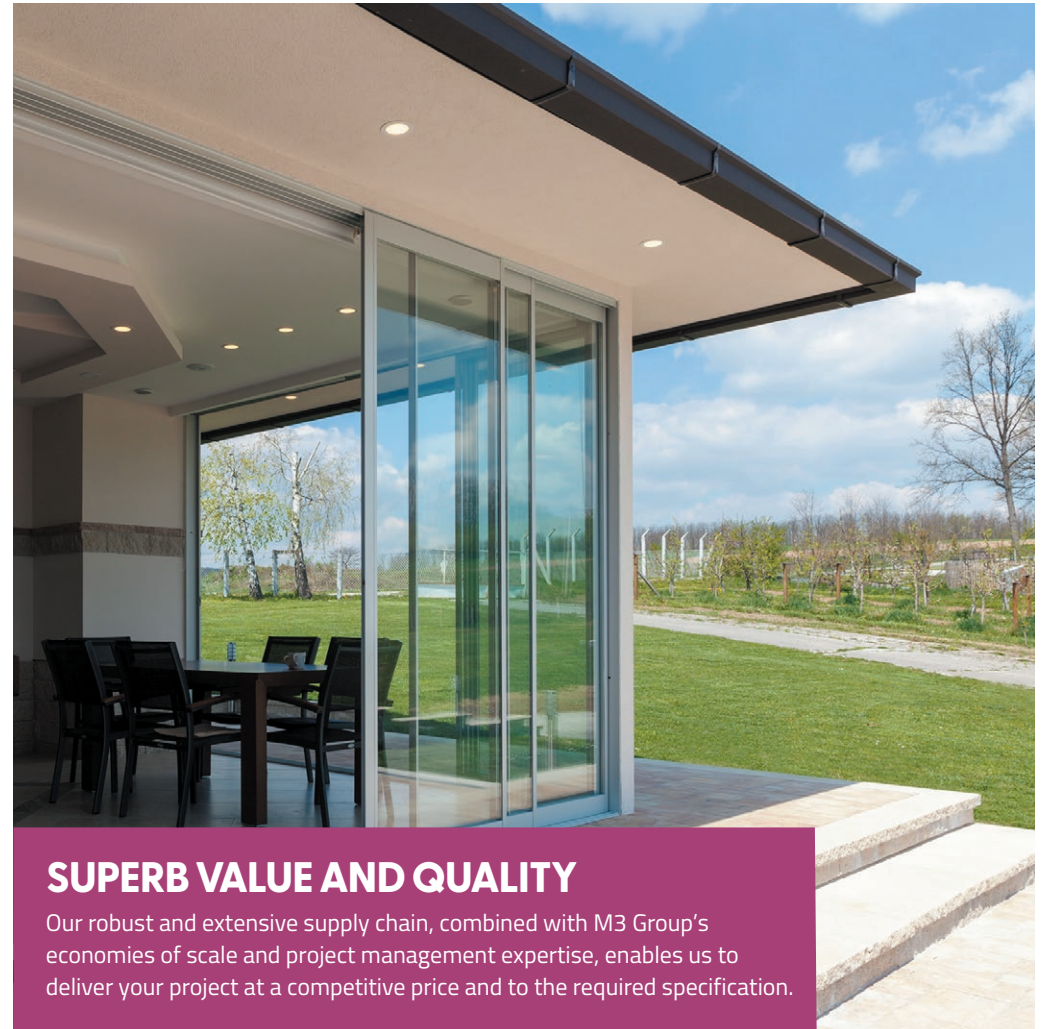

## CENTRALLY LOCATED

Located in Worcestershire with a with a fully established logistical network designed to cover the majority of the UK, we welcome the opportunity to tender for any new or existing development projects.

# WHY WORK WITH US?

We understand choosing the right partners to deliver your project successfully is critical. It's of vital importance to us when we're developing relationships with our supply chain.

When nurturing our supply chain we focus on developing long term, mutually beneficial relationships and it's no different when partnering with our customers.

## SUPERB VALUE AND QUALITY

Our robust and extensive supply chain, combined with M3 Group's economies of scale and project management expertise, enables us to deliver your project at a competitive price and to the required specification.

## QUALITY CONTROL

M3 Group has an ISO 9001 accredited Quality Management System, as such, will put quality management as a project priority for you.

### Planning & Preparation

We establish a Quality Management Schedule, which specifies the scope of quality inspections, check and balances. The will be approved by our Managing Director in collaboration with you prior to being used on-site. The schedule is planned so that all QMS elements are covered through the project duration.

Our project managers are fully trained to ensure our quality standards are upheld, prior to starting on-site we ensure that any refresher QMS/ Inspection training is given.

### Auditing

All works taken place appropriately qualified fitting teams, who are subject to regular inspection by ourselves and external parties. Any sign-off will be undertaken by competent, certified fitters and in line with our own guidelines, a benchmarking checklist which is signed to up-hold our manufacturing guarantee.

### Follow Up & Review

Following inspections, an inspection report is produced, this is passed on to our directors for review, alongside the correction action report (if applicable). We allow for all non-conformities to be corrected by operatives. We agree a suitable rectification process, whereby all installations are spot-checked by a supervisor for completion.

### Quality Control

We have an internal quality control register in which we store all inspection data for each project on a monthly basis. We clearly identify strengths and weaknesses within our delivery allowing us to improve future performance through further training. We use a lesson learnt approach whereby we learn through our previous strengths and weaknesses.

## DEDICATED PROJECT MANAGEMENT

Utilising the latest project management tools and extensive experience our project managers plan, organise, and direct the completion of projects, while ensuring they are on time, on budget, and within scope.

## WINDOWS & DOORS

Our windows and doors are durable and robust, giving long-life, low-maintenance performance. Delivering exceptional energy efficiency our window range will help to keep your home comfortable all year round. Fitted with high security locking mechanisms, our ranges will give you peace of mind.

We offer a range of high quality materials:

UPVC

---

COMPOSITE

---

TIMBER

---

ALUMINIUM

---

### WHY CHOOSE UPVC?

We are proud to provide the highest quality at the most cost-effective pricing with our A+ 14 ratings and low U-values our products exceed efficiency standards.

### WHY CHOOSE TIMBER?

Manufactured from Accoya, our range of timber doors & windows offer unrivalled sustainability. With the natural visual appearance, this range of products is a favourite for listed or period buildings.

# CAVITY CLOSERS

Cavity Closers are fast becoming a critical component of all new-build projects. They offer market leading thermal performance and are proven to help prevent condensation.

Our Cavity Closer is an energy-efficient aperture former which enables brick courses to be completed and creates an air-tight receiver for windows and doors.

Enabling you to quickly and cost-effectively close the cavity at window and door openings in almost any size or make-up of wall.

- Any cavity size available to special order
- For PVC-U, wood, metal and composite windows
- Easy way to improve the damp proof course

## WHAT ARE THEY MADE FROM?

Our closers are manufactured from post-consumer recycled PVC-U. Waste plastic which might otherwise go to landfill is re-processed into high quality,

# aspects

## ROOF LANTERNS

Our market leading roof lantern system is a versatile solution for transforming new or old roof spaces in a cost efficient way. A sustainable option using recycled polymer tiles reduces environmental impact without compromising performance. With an enhanced ventilation system, the roof can breath adequately reducing the risk of condensation.

New high performance styrene helps boost overall roof energy efficiency and thermal insulation to keep the room below comfortable enough to use all year round.

With increased structural strength our upgraded boarding in the roof system sandwich increases overall strength to allow larger areas without risk of sagging.

### ARE THEY SUSTAINABLE?

The precision manufactured recycled polymer tile system has excellent green credentials resulting in a reduced environmental impact.
